

GENESYS 7.0 Service Pack 1

31 July 2019

In order to best serve our user community, Vitech releases the initial service pack 30 days after product launch, with subsequent service packs released every 45 days thereafter, to resolve errors identified and add minor capability enhancements.

In the table below, the fixed bugs are grouped by area with a description of the main symptom observed. While we believe the likelihood of most users being impacted by these issues is low, it is recommended that you install this service pack, assuming the service pack deployment within your organization is reasonable.

We like to incorporate capability enhancements throughout the service pack cycle. We hope you will share your ideas with us by emailing our Customer Support Team at support@vitechcorp.com.

Unless otherwise noted, the installation of Service Pack 1 is the only action required to resolve the problem.

Reference	Description / Resolution Notes
Enhancements	
Component completeness check (12692)	Updated completeness check for Components to verify that a leaf-level Component has a performs target that is of type Atomic.
Architecture Rollup Script	A utility script has been added that will sum parameter values for user-selected parameters in the Component class. See script description for more details.
Admin Tools	
Administrator password update (12708)	Resetting the administrator password requires an update when the administrator next logs in.
Password security tab (12707)	Password security numeric fields require increment and decrement arrows instead of entering numbers.
User and Group list updates (12294, 12202)	User and group lists do not update when display information is updated.
Data	
Renumbering entity that has children (12737)	Renumbering an entity that has children displays several dialogs.
Renumbering read-only entity (12722)	Renumbering a read-only entity displays error "User does not have sufficient permission to update attributes for this entity."
Undo of Set Attribute command (12742)	Each set attribute command is undone separately instead of as a single action.
Diagrams	
Class – Add new association (12677)	Adding a new association to a node causes error "Object reference not set to an instance of an object."

Reference	Description / Resolution Notes
Class – Add new dependency (12679)	Adding a new dependency to a node causes error “Cannot set the style to an item that is not in this graph.”
Class – Bidirectional association on Performer (12171)	Adding a new bidirectional association to a Performer causes error “Object reference not set to an instance of an object.”
Filters	
Comparison using ID with a wildcard (12731)	Using a wildcard (? *) in a filter expression with entity property ID returns no valid values.
Duplicate with existing name (12730)	Duplicating a filter and using a name that already exists causes error “A filter with the same name already exists.”
Multi-select on expressions (11642)	Multi-select in a filter definition (using CTRL or SHIFT keys) does not work as expected.
Parameters	
Nil parameter value (12164)	When a parameter value is not set and is added to the entity’s description, the parameter designation string is output (e.g., [[length.Objective]]).
Remove parameter value in use (12163)	Removing a value that is in use in the description does not update the description.
Reports	
Date format options for entity values (11834)	If a date value that is part of an entity definition (attribute, property, or parameter) is output, the date format options in the designer are ignored.
Project Compare Report and parameter changes (12038)	The Project Compare Report has been enhanced to check and report parameter changes between projects.
Run report command and non-PDF formats (11685)	When running a script from the report context menu and selecting an output format that is not PDF, report parameters cannot be specified.
Scripts	
Duplicating a script (12608)	A duplicated script’s default name has a space which is invalid.
Error when script ends (12740)	In Windows 10, running any script causes error “Error while unloading appdomain.”
